

SIGNET™

Trust over anything

What is the Signet App?

Signet App is a simple, yet powerful application, which provides a secure and verifiable method for encrypting confidential messages on standard mobile devices.

How does the Signet App work?

1. Establish a trust relationship by exchanging cryptographic keys in a face-to-face meeting or over a video conference
2. Encrypt a quick message or a file, such as a document, picture or voice message
3. Use any available service for message delivery

What's the security of the Signet App?

All data transferred between peers is encrypted. The encryption keys are stored in the secure enclave on the mobile devices, never on a server.

The Signet Keep stores all your files on your device, keeping them encrypted and secure.

How to get the Signet App?

Signet App for Android is available for download from Google Play by invitation.

An iOS version is being developed.

Ask for a quote of roll-out package for your organization.

Top Spec Security

Signet App is a military grade cryptographic application which enables governmental and business users to communicate privately and securely mobile devices and widely available messaging services.

It is available for Android and later on for iOS mobile devices and it is compatible with most of email and instant messaging services around the world, including mail, WhatsApp, Slack and Dropbox among others.

Availability, Usability and Cost Efficiency

Today, government and business users recognise the cost efficiency, availability and usability of latest commercial technologies, devices and services. However, there are several technological, organisational, regulatory and compliance related challenges that usually prevent their use.

Signet App was developed as a low-cost, easy to adopt solution to bring standard mobile devices and services to the suite of available communication methods for governmental and corporate users in need of operational security and business critical confidentiality.

Signet App is based on widely reviewed Open Source Public Key Cryptography and it can be fully audited and verified by the customer or by the relevant national communication authorities. The Android version is currently audited for restricted level confidentiality.

The Signet Solution

- ✓ Signet App separates the layer of trust from the device, network and messaging service being used
- ✓ Signet App works without any external resources or connection to servers
- ✓ Signet App denies all third parties the means to break the established trust model

About Us

Signet Digital Ltd was established early 2018 to develop the Signet App. The company has its roots in The Finnish Defence Forces Research Agency project AVEX and Remod Oy, a cyber security consultancy company. Based in Oulu, Finland, Signet Digital Ltd is part of an internationally recognised cluster of cyber defence experts and companies.
